

UN WATER

# Water and the 3 Dimensions of Sustainable Development

# THE GLOBAL GOALS

For Sustainable Development

Targets	6.1	6.2	6.3	6.4	6.5	6.6
5.1, 5.2 End all forms of <b>discrimination against all women and girls ... / ... violence against all women and girls ...</b>						
5.4 Recognize and value unpaid care and <b>domestic work ...</b>						
5.5 Ensure <b>women's full and effective participation and equal opportunities ...</b> at all levels ... in political, economic and public life						

---

**FIGHTING INEQUALITY FOR WOMEN'S  
EMPOWERMENT AND DECENT JOBS**

Women and men have different perceptions on priorities needs and uses for water

The water sector will benefit from women's perspectives – we need to expand the range of problem solvers!

**ADDRESSING GAPS AND INEQUALITIES**

# WATER, IF NOT ENGENDERED, IS ENDANGERED!

- The **lack of sex-disaggregated data** is a major obstacle to the production of scientific evidence on gender-related inequalities in the water realm
- We need to create a **gender baseline knowledge** related to water and a global standard for gender sensitive water monitoring

45.2% of countries do not produce any gender statistics related to water (gender water data is among the least available of national-level indicators according to a 2013 survey by the UN Statistical Commission)

***A REALISTIC PICTURE is needed to inform policy makers and guide targeted actions and investments***

**OVER 80% OF OUR WASTEWATER  
FLOWS BACK TO NATURE UNTREATED.**
